Exhibit A

The Company will respond to and handle Software support requests and reported Software errors, bugs or malfunctions (each, an “Inquiry”) as set forth in this Exhibit. The Company’s handling and resolution of Inquiries is subject to the following procedure and scheme:

1. At any time between deploying the Azure Node and submitting an Inquiry, the Customer shall activate this Agreement by either (i) contacting the Company to request its Azure user information and adding this user as a “Reader” in the Access Control settings of the Azure Node’s virtual machine or (ii) sending a screenshot of the Azure Node’s virtual machine properties to the Company showing its public IP address and use of the Company’s application. In both cases the company shall be corresponded with at sla-azure@multichain.com.

2. The Customer shall submit email Inquiries to the Company at sla-azure@multichain.com, which shall include either: (i) all of the Information listed below relating to the Azure Node which generated the Inquiry and any other pertinent information at the Customer’s disposal, or (ii) items a and b listed below plus the provision of shell command line access to the Azure Node for which the Inquiry relates. The time at which either (i) the email, including all of the Information below, is received in the Company’s systems (as logged and recorded by the Company) or (ii) written confirmation has been sent by Company that shell command line access has been achieved, is regarded as the “Inquiry Time”. Information required for option (a):
   a. A description of the error, bug or malfunction generating the Inquiry, including related error messages displayed on the command line or returned in API responses.
   b. An approximate estimate of the current Transaction Rate and Data Rate (see Definitions) of the network to which this instance is connected.
   c. The exact version of MultiChain currently used on the Azure Node.
   d. Specifications of the Azure Virtual Machine on which the Azure Node is running, including the virtual machine instance type and installed disk capacity.
   e. Currently free memory and disk space in the Azure Virtual Machine on which the Azure Node is running.
   f. The output of the Linux top command sorted to show the most active processes on top.
   g. The last 1000 lines of the debug.log file from the instance’s blockchain directory.
   h. If the instance’s API is responsive, the output of the API commands below:

```
getblockchainparams
getruntparams
getinfo
getinitstatus
getwalletinfo
listassets * true 1000
liststreams * true 1000
listblocks -1000
listunspent 0
listupgrades
getnetworkinfo
getpeerinfo
getblockchaininfo
getmempoolinfo
```
   i. Before including this information in the Inquiry, you may optionally remove or black out confidential details such as private keys, blockchain addresses, IP addresses and the names of other programs running on the host system.

3. Upon receiving an Inquiry from the Customer, along with all information required regarding the Inquiry, the Company, using its reasonable judgment, will triage the Inquiry according to severity level as either Critical or Non-Critical under the following guidelines:
   a. Critical – Complete failure of the Software or a significant fault in one or more of the mission critical functionalities of the Software;
b. Non-Critical – The Software is partially malfunctioning, faults in non mission critical functionalities of the Software, or minor errors or malfunctions in the Software.

4. Once the Company completes triage, it will communicate to the Customer an initial response acknowledging receipt of the Inquiry, the severity level assigned to the Inquiry at triage and confirming that the Company has commenced handling the Inquiry. The Company will record the time the initial response was sent to the Customer. This is regarded as the “Response”.

5. “Resolution” is the Company’s provision of a stable or long-term solution or workaround, substantially resolving the symptoms reported in the Inquiry.

The Company will handle Inquiries within the timeframes set forth below. Times are clocked in relation to the Inquiry Time, as recorded in the Company’s logs.
